Application Engineer at Grundfos

EXPERIENCE

Grundfos (NewTerra), Remote — *Application Engineer II*

January 2026 – Present

- Review customer specifications, resolve issues, clarify requirements, and budget for non-standard requirements.
- Work with the sales and operations teams to develop commercial strategies for competitive projects and document strategy sessions.
- Collaborate with suppliers and procurement to obtain component and equipment costs.
- Prepare proposals including technical equipment details, draft process flow diagrams and layout drawings, influent parameters, discharge criteria, clarifications, customer technical questionnaires, and appendices.
- Work with the sales team and supervisors to manage bid submission information, estimate project schedules, and respond to customer questions.

Xylem, Fredericton — *Application Engineer*

August 2022 – December 2025

- Generating wastewater treatment proposal with CADD department, cost estimators, sales to customers
 - Process Design for Full Scale Projects
 - Prepared P&IDs, technical documents (O&M manuals) for wastewater treatment systems
 - Coordinate with Equipment Vendor with equipment delivery
 - Start-up and commissioning
 - Working with electrical engineers, subcontractors to commission and start-up treatment system
 - Project Management Support
 - Assist in budgeting, equipment selection (pumps, blowers, valves) for various projects.

EDUCATION

University of New Brunswick, Fredericton — *B.Eng*

September 2018 - June 2022

PROJECTS

Anaerobic Digestion project in California (2024)

Start-up and commissioned the anaerobic membrane bioreactor system in California. From project execution to commissioning. Assisted with P&IDs, preparing O&Ms, all the way to commissioning.

Aerobic MBR project in Houston, TX (2023)

From proposal development to project execution, I worked with the senior process engineer in designing the wastewater system. Answering questions from clients, providing process inputs when needed.
